## Overview

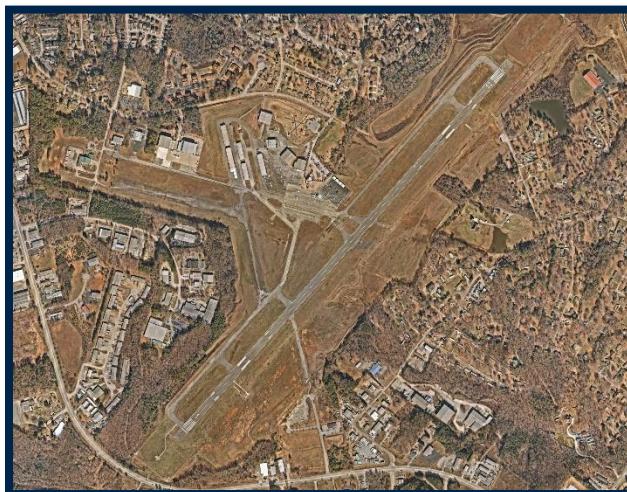

### Introduction

For over 20 years, the South Carolina Aeronautics Commission (SCAC) has implemented an airfield pavement management program for publicly owned South Carolina airports. As part of their grant assurances federally obligated airports are required to perform detailed inspections as outlined in the FAA Advisory Circular 150/5380-7B – “Airport Pavement Management Program (PMP)”. All inspections performed within this program follow the guidance documented within the ASTM D5340-20 – “Standard Test Method for Airport Pavement Condition Surveys”. This is an objective process to assess the pavement condition in a consistent and repeatable manner.

Due to ever-changing pavement conditions, the FAA AC 150/5380-7B recommends the PMP be updated every 3 years. The overall pavement conditions are analyzed using the ASTM PCI methodology. It provides decision makers with a comparison of pavement facilities and a relative indication of their required maintenance or level of repair to aid in project prioritization. A detailed explanation of the SCAC airfield pavement management program process and pavement management terminology can be found in the SCAC Statewide Report.

Project elements preformed for this 2021-2024 program update include the development and updates of pavement inventories, documentation of pavement conditions, performance modeling, and maintenance and rehabilitation (M&R) needs for all participating airports. This report summarizes the results of the SCAC pavement program update at Spartanburg Downtown Memorial Airport/Simpson Field (SPA).

SPA - Spartanburg Downtown Memorial Airport/Simpson Field

## System Inventory

The pavements at Spartanburg Downtown Memorial Airport/Simpson Field (SPA) include approximately 2.0 million square feet of airfield pavements consisting of runways, taxiways, taxilanes and aprons. Per the guidance in the ASTM D5340-20, all pavements were divided and subdivided into pavement management units (Network, Branch, Section, Sample). The divisions are documented in the **Network Definition Exhibit** providing the name and location of each branch, section, and sample.

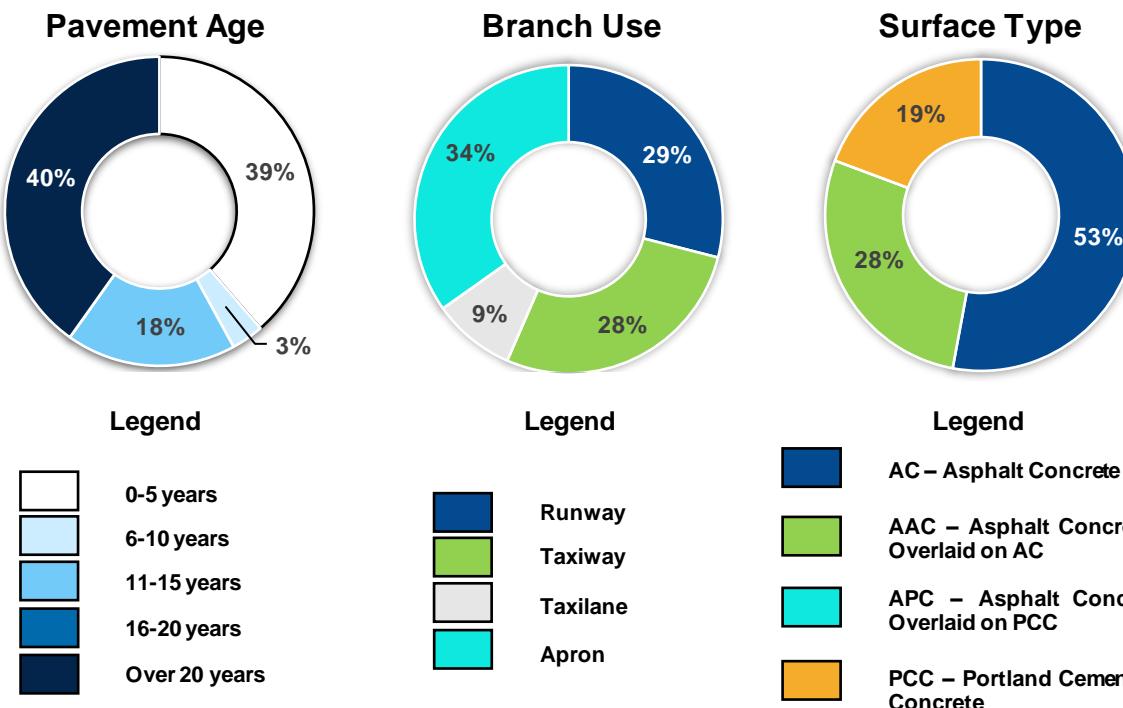

Each pavement update included a review of documentation of any maintenance and major rehabilitation related activities performed on the airfield pavements. The following table summarizes the projects that have occurred since the previous inspection.

Table 1 - Recent Airfield Pavement Construction

Construction Year	Location	Work Type / Pavement Section
2019	RW 5, TWA, TWA1, TW A2, TW A7	Complete Reconstruction - AC   4" P-401, 14" P-209, 12" P-152
2019	RW 5	Mill and Overlay   3" P-401, VARIABLE DEPTH P-403
2019	RW 5, TWA, TWA3, TW A8	New Construction - AC   4" P-401, 14" P-209
2019	TW A4, TW A5	Complete Reconstruction - AC
2022	AP 02	Slab Replacement - PCC
2022	AP 02	Complete Reconstruction - PCC

The following figure summarizes the inventory items at Spartanburg Downtown Memorial Airport/Simpson Field (SPA). The **Estimated Age Exhibit** provides the last major work date for each pavement section based on the collected documentation.

## Functional Evaluation

### Pavement Condition Index

A Pavement Condition Index (PCI) survey is the primary means of obtaining and recording pavement distress data. In adherence to FAA Advisory Circular 150/5380-7B, the SCAC Airfield Pavement Management System (APMS) Update utilizes the PCI survey methodology to collect pavement distress data and analyze the condition. This method uses a visual statistical sampling of pavements for recording primary distress types, associated severities, and quantities as defined by the ASTM D5340-20.

Visual condition data collected during the PCI survey is analyzed and used to calculate the current PCI for each inspected sample unit and section. The PCI is a value ranging from 0 to 100, which indicates the apparent structural integrity and surface operational condition of the pavement, with "100" indicating a pavement in new condition and "0" indicating a failed pavement section. Pavement Condition Ratings are associated with PCI categories that range from "Failed" to "Good". Representative photos of varying Pavement Condition Ratings are displayed in **Figure 3**.

Figure 3 – Representation of Pavement Condition Index Values

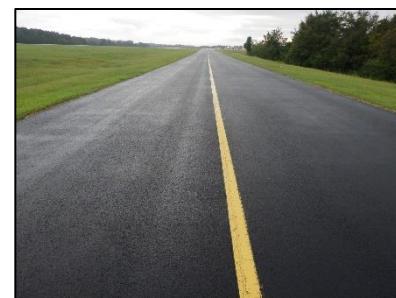

**Poor/Failed Pavement**

Pavements that are Poor to Failed require significant and costly interventions such as reconstruction to restore the pavement to operational service.

**Fair Pavement**

Pavements with a Fair condition rating typically require rehabilitation, or maintenance activities if rehabilitation cannot be immediately performed.

**Good/New Pavement**

Pavements classified as Good require either no treatment or would benefit from the application of preventive maintenance activities such as crack sealing. .

## STATEWIDE AIRFIELD PAVEMENT MANAGEMENT SYSTEM UPDATE

 SPA - Spartanburg Downtown Memorial Airport/Simpson Field

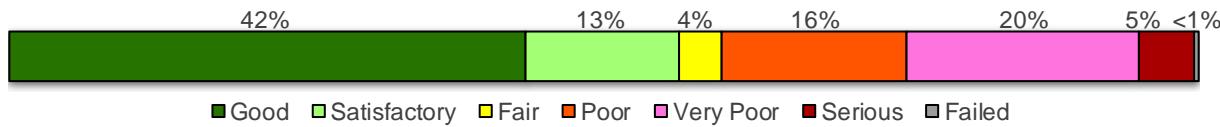

### Critical PCI

From a pavement management perspective, one of the most valuable aspects of the PCI methodology is the ability to save money by effectively prioritizing the rehabilitation of pavement assets. Critical PCI refers to the condition beyond which the rate of pavement deterioration and the cost of applying a treatment increases significantly. In other words, it is the condition at which maintenance may no longer be cost effective and major rehabilitation should be considered. Based on the 2019 FAA Order 5100.38D Change 1 Airport Improvement Program Handbook, the FAA has established recommended PCI thresholds for pavement M&R. Accordingly, **the Critical PCI for all SCAC airfield pavements is defined at 70.**

### PCI Results

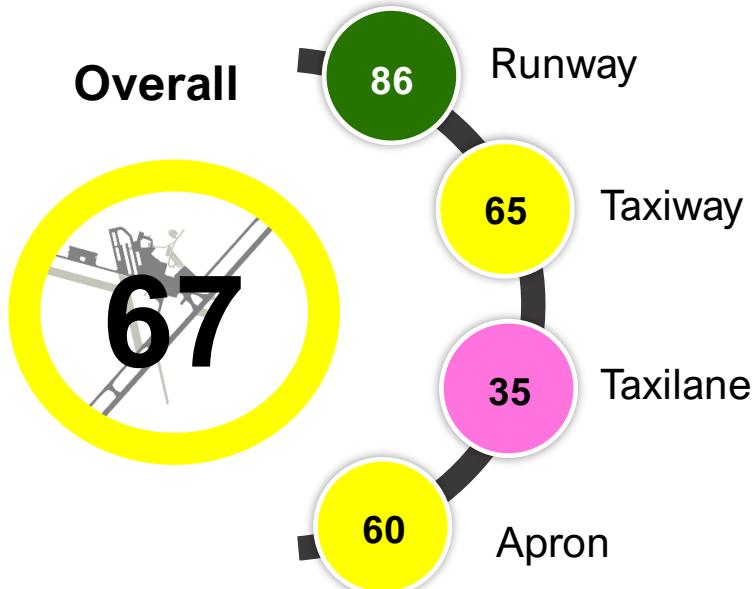

The PCI survey for Spartanburg Downtown Memorial Airport/Simpson Field (SPA) was performed in January 2023. **The overall area-weighted average PCI value of the network was 67**, representing a condition rating of **Fair**. Approximately 55% of inspected pavements are in Good or Satisfactory condition, 4% of inspected pavements are in Fair condition, and the remaining 41% are in Poor or worse condition as summarized in **Figure 4**.

Figure 4 – Overall Network PCI Results

The area-weighted average PCIs by branch use are summarized in the figure below. The current PCIs at a section-level are displayed graphically on the **2023 Airfield Pavement Condition Index Exhibit** and are summarized in **Table 2**.

Figure 5 – Area Weighted Average Pavement Condition

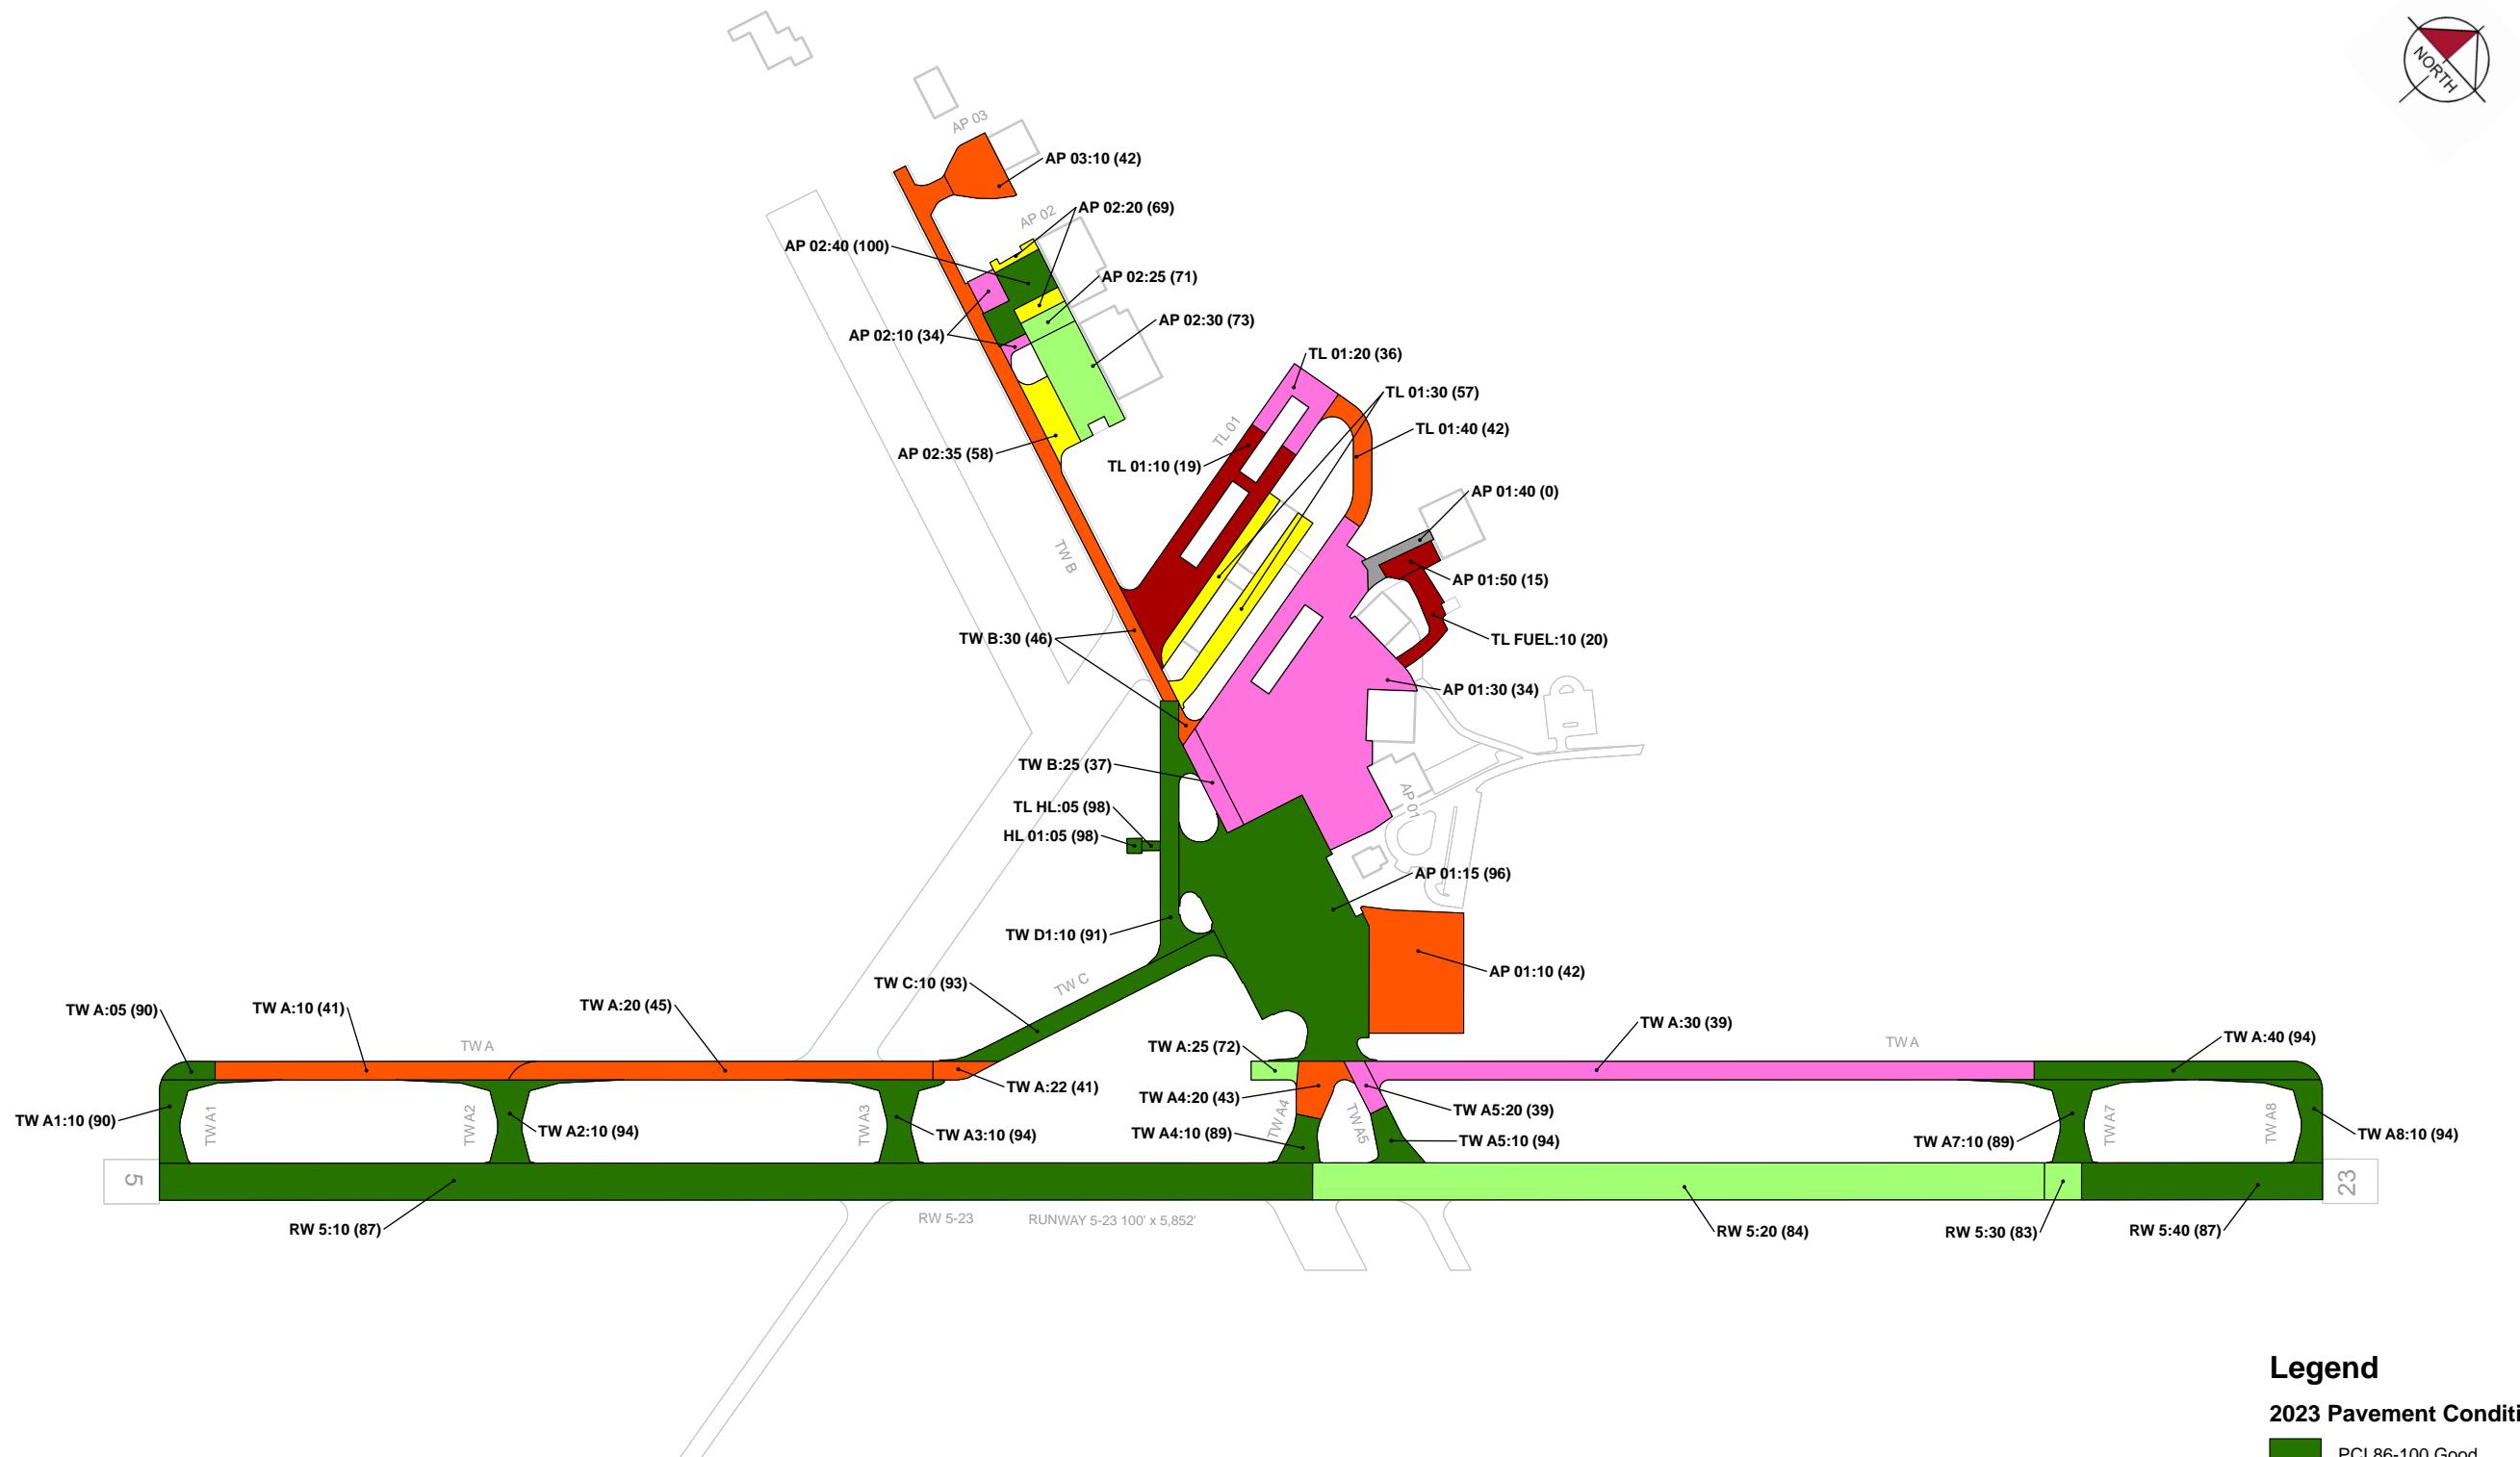

# STATEWIDE AIRFIELD PAVEMENT MANAGEMENT SYSTEM UPDATE

 SPA - Spartanburg Downtown Memorial Airport/Simpson Field

## Pavement Condition Forecast

A primary objective of this APMS is to estimate the future condition of each individual pavement section. PAVER™ was utilized to develop prediction curves and determine typical deterioration rates that are then used to forecast a future PCI value. This value will assist decision makers in determining at what point in time certain pavement sections will require rehabilitation. The figure below shows the current and 5-year area-weighted forecasted pavement condition distribution of each functional use (Runway, Taxiway, Taxilane, Apron) found at the Airport. The forecasted 5-year PCIs at a section-level are displayed graphically on the **2028 Forecasted Airfield Pavement Condition Index Exhibit** and are summarized in **Table 3**. All forecasts presented assume that no maintenance or rehabilitation is performed within the 5-year analysis period. **Figure 6** displays the forecasted pavement conditions at the branch-level for SPA.

Figure 6 – Forecasted 5-Year PCI by Branch Use

All condition forecasts are based on historical observations and analysis of South Carolina airfield pavements. The forecasts are not a guarantee of future PCI: - rather, they are a planning tool to aid in the timing of maintenance and rehabilitation activities.

## M&R Overview

An analysis was performed to assess the pavement maintenance and rehabilitation (M&R) needs at SPA over a 5-year period. The analysis compared the forecasted condition of each pavement section to the Critical PCI threshold to develop a resultant recommendation and associated cost for each year of the 5-year plan. The M&R analysis should enable responsible parties to do the following:

- **Maintain** existing airport infrastructure at an acceptable condition
- Make timely and cost-effective **decisions** to appropriately allocate funding
- **Apply** global maintenance, localized maintenance, and major M&R activities in a timely manner to maintain an acceptable operational condition of a pavement network.

M&R planning considers various methods of repair to address the cause of the problem rather than just treating the symptom. As pavements deteriorate, repair costs can increase significantly. Once pavements have deteriorated below a certain condition threshold (the Critical PCI value), the pavement benefits more from substantial rehabilitation in lieu of maintenance activities. The figure below illustrates how the cost of pavement repairs can exponentially increase if M&R activities are delayed.

Figure 7 – Pavement Life and the Effect of Treatments

# STATEWIDE AIRFIELD PAVEMENT MANAGEMENT SYSTEM UPDATE

## SPA - Spartanburg Downtown Memorial Airport/Simpson Field

### Localized Maintenance and Repair

Localized maintenance is best used as a preservation measure and is applied to slow the rate of deterioration. These activities typically include crack sealing and patching. Localized maintenance differs from major rehabilitation in that it is applied based on the distresses observed rather than based on a PCI value. Treatments are selected based on the appropriate corrective measure for a given distress type and severity level. Localized maintenance applied on pavements with PCIs above the Critical PCI of 70 is known as Preventive Localized Maintenance, while Stopgap Localized Maintenance is typically applied to pavement sections that are at or below the Critical PCI value as a temporary repair due to safety concerns. The current localized maintenance needs are summarized in the table below.

Table 4 – Localized Maintenance Summary by Policy Type

Localized Maintenance Category	Localized Work Type	Rough Estimate of Work Quantity	Work Units	Planning Material Cost
Localized Preventive Maintenance	AC Crack Sealing Narrow	16,587	LF	\$ 58,100
	Surface Seal	6,399	SF	\$ 10,560
	PCC Crack Sealing	235	LF	\$ 1,660
	PCC Joint Seal	6,130	LF	\$ 42,930
	PCC Partial-Depth Patching	55	SF	\$ 4,940
<b>Localized Preventive Maintenance Total =</b>				\$ 118,190
Localized Stopgap Maintenance	AC Crack Sealing Narrow	114,393	LF	\$ 400,490
	Surface Seal	339,485	SF	\$ 560,240
	AC Partial-Depth Patching	71	SF	\$ 610
	AC Full-Depth Patching	17,463	SF	\$ 502,120
	PCC Crack Sealing	85	LF	\$ 600
	PCC Joint Seal	1,663	LF	\$ 11,650
	PCC Slab Replacement	3,850	SF	\$ 173,260
<b>Localized Stopgap Maintenance Total =</b>				\$ 1,648,970
<b>Planning-Level Localized M&amp;R Needs =</b>				<b>\$ 1,767,160</b>

### Major Rehabilitation Needs

Major rehabilitation needs are identified by analyzing the Airport's pavement condition in relationship to the Critical PCI value, density of load-related distresses, and major rehabilitation policies, assuming there are no budget constraints. The needs analysis is performed over a 5-year analysis period. Major rehabilitation is divided into two policy categories:

- **Intermediate Major Rehabilitation (PCI 56 to 70) –**
  - **AC:** Milling of the upper surface course and replacing with new AC with isolated areas of full-depth reconstruction
  - **PCC:** Combination of crack sealing, joint seal replacement, limited patching, and slab replacement
- **Full-Depth Reconstruction (PCI 0 to 55) –** Removal and replacement of the existing pavement section down to the subgrade

## STATEWIDE AIRFIELD PAVEMENT MANAGEMENT SYSTEM UPDATE

### SPA - Spartanburg Downtown Memorial Airport/Simpson Field

The 5-year major rehabilitation needs analysis at SPA results in a total 5-year cost of \$30.81M. The **5-Year Major Rehabilitation Needs Exhibit** graphically depicts the major rehabilitation needs at a section-level which are also summarized in **Table 5** with rounded costs. Annual needs are displayed graphically in **Figure 8**.

```

Detailed description: The diagram illustrates the hierarchical structure of branch IDs and sample units for runway RW 13-31. It starts with the main runway ID (RW 13-31) which branches into TYPICAL RUNWAY BRANCH ID, TYPICAL TAXIWAY BRANCH ID, and TYPICAL APRON BRANCH ID. Below RW 13-31 is a Pavement Branch ID (RW 13:10). This ID further divides into PAVEMENT SURFACE TYPE, NUMBER OF SAMPLE UNITS IN SECTION (5), and NUMBER OF SAMPLE UNITS TO BE INSPECTED (15). At the bottom, there is a box labeled RW 13:20 containing the text 'SECTION NOT INSPECTED DUE TO RECENT CONSTRUCTION. SEE ESTIMATED AGE EXHIBIT FOR CONSTRUCTION DATES.' and 'C 0 of 5'. To the right of this box are two labels: '100' and 'INSPECTED SAMPLE UNITS.'

TOTAL SAMPLES INSPECTED = 98  
AC: 79 PCC: 19

UNWAY LENGTHS DEPICTED IN THIS DRAWING ARE FOR  
AVEMENT MANAGEMENT PURPOSES ONLY AND MAY NOT  
ATCH PUBLISHED RUNWAY LENGTHS. DRAWING NOT TO SCALE.
